

Timber Blind Maintenance

Cleaning

Do not use a damp or wet cloth on oiled blinds as this may stain or mark the blind.

For lacquered blinds a very soft damp cloth can be used. Ensure there is no grit on cloth as this will scratch your blind.

Do not use silicone based products for cleaning as staining can occur.

To clean, vacuum using a soft brush attachment or a feather duster.

Clean frequently to ensure that a dust build up does not occur.

Depending on the harshness of the direct sun, oiled blinds will need to be re-oiled as required with wood oil that can be purchased at a good hardware store. This also avoids drying and cracking of the timber.

Operating

When lowering or lifting blinds, make sure they are in an open position.

When lowering and lifting larger blinds, make sure you hold the bottom rail as the weight of the slats could cause strain on the cords.
